

## AMENDMENTS TO THE CLAIMS

B1  
sub  
C1

1. (Currently Amended) ~~The use of A method of using a radiation-curable composite layered sheet or film comprising at least one substrate layer and one outer layer for , the method comprising coating moldings, wherein the outer layer is composed of a radiation-curable composition which comprises a binder having a glass transition temperature of more than 40°C~~ the sheet or film of claim 13 on a surface.

2. (Currently Amended) ~~The use of a sheet or film as claimed in claim 13, wherein the outer layer is transparent.~~

3. (Currently Amended) ~~The use of a sheet or film as claimed in claim 13, wherein there is additionally further comprising a coloring interlayer between the at least one substrate layer and the outer layer.~~

4. (Currently Amended) ~~The use of a sheet or film as claimed in claim 13, wherein there is additionally further comprising a layer of polymethyl methacrylate between the coloring interlayer and the outer layer.~~

5. (Currently Amended) ~~The use of a sheet or film as claimed in claim 13, wherein the radiation-curable composition is in the a noncrosslinked state.~~

6. (Currently Amended) ~~The use of a sheet or film as claimed in claim 13, wherein the radiation-curable composition comprises polymers containing ethylenically unsaturated groups, alone or as a mixture with low molecular mass, radiation-curable compounds, or mixtures of saturated, thermoplastic polymers with ethylenically unsaturated compounds.~~

BT  
cont.

7. (Currently Amended) The ~~use of a~~ sheet or film as claimed in claim 13, wherein the at least one substrate layer comprises a layer ~~of~~ comprising a thermoplastic polymers, particularly polymer selected from the group consisting of polymethyl methacrylates, polybutyl methacrylates, polyurethanes, polyethylene terephthalates, polybutylene terephthalates, polyvinylidene fluorides, polyvinyl chlorides, polyesters, polyolefins, polyamides, polycarbonates, acrylonitrile-butadiene-styrene (ABS) polymers, acrylic-styrene-acrylonitrile (ASA) copolymers, acrylonitrile-ethylene-propylene-diene-styrene copolymers (A-EPDM), polyether imides, polyether ketones, polyphenylene sulfides, polyphenylene ethers ~~or~~ and mixtures thereof.

50B  
C1

8. (Currently Amended) A ~~process for producing~~ method of making a radiation-curable composite layered sheet or film ~~as claimed in claim 1, which comprises~~ , the method comprising

extruding ~~the~~ a radiation-curable composition comprising a binder having a glass transition temperature of more than 40°C; and

producing the film or sheet of claim 13.

9. (Currently Amended) ~~A process~~ The method as claimed in claim 8, wherein the extruding comprises coextruding at least one further layer with the radiation-curable composition and at least one further layer are coextruded.

10. (Currently Amended) A ~~process for producing coated moldings, especially motor vehicle parts, which comprises adhesively bonding the~~ method of using a radiation-curable composite layered sheet or film ~~as claimed in claim 1 to said moldings and then~~ , the method comprising

adhesively bonding the sheet or film of claim 13 to a surface; and

curing the outer layer of the bonded sheet or film by means of radiation.

BT  
Cont.  
11. (Currently Amended) A ~~process for producing coated moldings, especially motor vehicle parts, which comprises thermoforming method of using~~ a radiation-curable composite layered sheet or film ~~as claimed in claim 1 in a thermoforming mold and , the method~~ comprising

thermoforming the sheet or film of claim 13 in a thermoforming mold;

injection-backmolding the reverse of the at least one substrate layer with ~~the a~~ polymer composition, ~~the ; and~~

sub  
CL  
radiation-curing of the outer layer ~~taking place~~ after the thermoforming operation or after the injection-backmolding.

12. (Currently Amended) A coated molding obtainable by a process ~~as claimed in claim 10 comprising~~

coating the sheet or film of claim 13 on a molding; and

curing the outer layer of the coated sheet or film by means of radiation.

BT  
SWB  
CL

13. (Currently Amended) A self-supporting, radiation-curable, composite layered sheet or film comprising at least one substrate layer and one outer layer composed of, wherein the outer layer comprises a radiation-curable composition which comprises comprising a binder having a glass transition temperature of more than 40°C, wherein there is additionally a coloring interlayer between the substrate layer and the outer layer.

14. (Canceled)

15. (Canceled)

16. (Canceled)

B2

17. (New) The sheet or film as claimed in claim 13, wherein the binder has a glass transition temperature in a range of from 40 to 130°C.

18. (New) The sheet or film as claimed in claim 13, wherein the binder has a glass transition temperature in a range of from 50 to 130°C.

409  
CL

19. (New) The sheet or film as claimed in claim 13, wherein the binder has a glass transition temperature in a range of from 60 to 130°C.

20. (New) The sheet or film as claimed in claim 13, wherein the binder comprises an ethylenically unsaturated member of the group consisting of polyesters, polyethers, polycarbonates, polyepoxides and polyurethanes.

21. (New) The sheet or film as claimed in claim 20, wherein the binder comprises an ethylenically unsaturated member of the group consisting of polyethers, polycarbonates, polyepoxides and polyurethanes.

22. (New) The sheet or film as claimed in claim 13, wherein the binder has a viscosity in a range of from 0.02 to 100 Pas at 140°C.

23. (New) The sheet or film as claimed in claim 13, wherein the radiation-curable composition is curable by a free-radical or ionic mechanism.

943  
C1- B2  
604

24. (New) The coated molding as claimed in claim 12, wherein the coated molding is  
a motor vehicle part.
